### Project Demo Planning:

The project demonstration is planned to present the Credit Card Approval Prediction system in a clear and organized manner. The demo covers the problem statement, system architecture, live application workflow, machine learning prediction process, deployment, and future enhancements. The objective is to demonstrate the complete functionality of the system and highlight its practical applications.

| S.No | Demo Section          | Description                                                | Duration (mins) | Responsible Member  |
|------|-----------------------|------------------------------------------------------------|-----------------|---------------------|
| 1    | Introduction          | Introduce the project, objectives, and problem statement   | 2               | Jonnala Rajeshwar   |
| 2    | System Architecture   | Explain the architecture, workflow, and technologies used  | 3               | Nagari Afeefa Begum |
| 3    | Live Application Demo | Demonstrate data input and credit card approval prediction | 5               | Yasaswani Prasad    |
| 4    | Model Performance     | Present accuracy, evaluation metrics, and testing results  | 2               | Gayathri Gollapolu  |
| 5    | Deployment            | Show the live application deployed on Render platform      | 2               | Lohith Sai Patem    |
| 6    | Future Enhancements   | Explain scalability, future improvements, and conclusion   | 1               | Gayathri Gollapolu  |

### Demo Flow Summary:

| Step | Activity                         | Notes                                                                                    |
|------|----------------------------------|------------------------------------------------------------------------------------------|
| 1    | Introduction & Problem Statement | Explain the need for automated credit card approval prediction.                          |
| 2    | Solution Overview                | Describe the machine learning model, Flask application, and deployment architecture.     |
| 3    | Live Feature Demonstration       | Enter applicant details, generate prediction, and display the approval/rejection result. |
| 4    | Q&A Session                      | Answer evaluator questions and discuss future enhancements.                              |
